

[Chapter 15.04 SUBDIVISIONS](#)

Section 15.04.640 Steel or cast iron grates and lids.

The preferred covering over any cleanout box or catch basin is a removable grate. Lids are cumbersome and inspection of the water flow isn't facilitated as quickly as in the case of a metal grate.

Exact grate design is not specified, but all grates must meet HS-20 traffic loading specifications and be constructed to bicycle safety standards. Grates shall not extend above walls of concrete structure when installed. (Ord. 5-1988 § 1 (part); Development Code 4-4-6)
